

# Structure of the Build file - <project>

- The root tag of the build.xml file is **project**
- Every build.xml will have a single Project
- Every Project will have at least one **target**
- Every target will have one more **task** elements

```
<project name="My first Ant" default="one">
```

- The above code snippet indicates that
  - The name of the project is My first Ant
  - The default attribute is assigned "one"
  - Here the target 'one' gets automatically executed as soon as we execute the ant command
  - If you call ant without any arguments it will execute one

## Assignment

1. Create build.xml in a notepad file
  2. Save it in D:\
  3. Open command prompt, go to D drive and issue the **ant** command
  4. Note the output generated
- 
1. In the same command prompt, type **ant two**
  2. Note down your results
- 
1. Now remove the default attribute in project tag
  2. In the command prompt, give **ant** command and note your observations
